

Job Vacancy | PHP Software Developer

Are you looking for a new opportunity to challenge yourself?

Do you see yourself working in a young and professional team?

Do you want to be part of innovation in the international meeting industry?

How Sendsteps contributes

Sendsteps is an Amsterdam-based IT company that developed an audience interaction tool. With it we improve audience engagement during in-house meetings and large events;

The Sendsteps PowerPoint add-in enables speakers to add questions to their presentation. Once the questions are presented, attendees can then respond via their smartphone, tablet or laptop using Web, Twitter or SMS. Not only does this support a real-time dialogue, it also generates high volume data that is valuable to many organizations.

Our aim is to make the millions of presentations that are delivered every day, more interactive by allowing attendees to actively participate instead of only listening. Sendsteps is used in more than 50 countries in the business, health, education and governmental sector. Next to our head office in Amsterdam (Next to Central Station), we have offices in Sao Paolo and Los Angeles.

How you are involved

You will start a complete new project. Yep, from scratch! The Sendsteps Dashboard is an online platform that allows speakers to setup and manage their interactive presentation. Your primary goal is to analyse, design and implement [y]our ideas into the dashboard. In all your actions, user friendliness and data

protection, will be central themes. Your contribution will have a major impact on all our clients. A challenging task with a lot of responsibilities. Additional tasks include developing and maintaining a number of servers and so-called response websites. Some of our larger and international clients have specific requests that we also need to be able to cater to.

About you in details

You are a creative thinker, ready for a second or third challenge in your programming career. You are able to translate a client's questions into smart solutions. Our team and clients appreciate complex IT issues to be explained by you in clear and understandable language. Do you recognize yourself in being open minded, analytical, flexible, positive and do you like a challenge?

Our Requirements

- HBO or Academic degree in informatics or IT-related
- Proven development experience in web-development [PHP/HTML/CSS/Javascript]
- Additional experience in Java and MySQL preferred
- Fluent in written and spoken English and/or Dutch
- An interest and eagerness to spot new IT trends
- Able to work organized and accurate
- Hands-on and result-driven team player

Our Offer

- A competitive salary
- A 10% annual profit share
- Work in a young team in a growing international market
- A flexible and enthusiastic work environment
- An office on an exciting location and with an impressive view
- Free and inspiring lunch sessions
